

**ALTERNATIVE FUEL VEHICLES AND EMERGENCY RESPONSE: NEW TOOLS AND RESOURCES FOR  
EMERGENCY MANAGERS**

*Breakout Session at the International Association of Emergency Managers Annual Conference*

Savannah International Trade and Convention Center  
1 International Drive, Savannah, Georgia, 31402  
Wednesday, October 19, 2016  
3:00 p.m.

**BREAKOUT SESSION SUMMARY**

When petroleum is in short supply, alternative fuel vehicles can provide needed transportation services and help communities prepare for and recover from disaster. The Initiative for Resiliency in Energy through Vehicles (iREV) is a nation-wide project that has developed resources that emergency planners can use to integrate alternative fuel vehicles into emergency planning and response activities. During this session, speakers provide an overview of iREV, and will demonstrate a new online tool that is designed to help visualize the location of alternative fuel vehicles and infrastructure and integrate these resources into emergency planning. Participants will also learn about the National Clean Cities Program, and what resources and assistance is available from their local Clean Cities Coalition.

**Moderator**

- *Cassie Powers, Program Manager, National Association of State Energy Officials*

**Presenters**

- *Thomas Mihalic, Software Engineer, Concurrent Technologies Corporation*
- *Chuck Feinberg, Chairman and DOE Coordinator, New Jersey Clean Cities Coalition*
