Welcome to the Web site of the Infrastructure Security and Energy Restoration (ISER) Division. ISER is part of the Department of Energy's (DOE) Office of Electricity Delivery and Energy Reliability (OE), which coordinates DOE's response to energy emergencies, prevents terrorist use of the energy infrastructure, and helps all levels of government and the private sector recover from energy supply disruptions.

We work with the Department of Homeland Security, the Federal Energy Regulatory Commission, and other national, regional, state, and local government and commercial organizations to:

- Support the national critical infrastructure protection program
- Analyze infrastructure vulnerabilities and recommend preventive measures
- Help other agencies prepare for and respond to energy emergencies and minimize the consequences of an emergency
