

# North Dakota

## North Dakota Organizations and Consumers are Saving Money and Protecting the Environment with ENERGY STAR®

### Benefits

- North Dakota businesses and residents will save more than \$200 million through investments already made in ENERGY STAR qualified products, homes, and buildings.
- The investments in North Dakota already made through ENERGY STAR will prevent the emissions of 500,000 metric tons of greenhouse gases, equivalent to eliminating the emissions from 370,000 vehicles.
- If North Dakota organizations and consumers pursued all opportunities for profitable energy efficiency improvements through ENERGY STAR, current savings could grow 4-fold.

### Highlights

- North Dakota is home to 21 companies and public entities participating in ENERGY STAR, including:
  - 2 school districts
  - 2 congregations
  - 2 manufacturers of ENERGY STAR qualified products
  - 8 companies that build, provide 3rd party testing of, or promote ENERGY STAR qualified homes
- Consumers can purchase ENERGY STAR qualified products at some 40 locations across the state.
- ENERGY STAR qualified homes are offering North Dakota families greater savings and comfort than those built to code.
- 41 buildings (over 3 million square feet) in North Dakota have been rated for energy efficiency using EPA's energy performance rating system.
- 6 buildings have earned the ENERGY STAR for superior efficiency, including 2 schools, 1 supermarket, 1 hospital, and 2 office buildings. These buildings typically use 35% less energy than average buildings.
- North Dakota is bringing energy efficiency to its residents by participating in the ENERGY STAR *Change a Light, Change the World* campaign. Through the 2006–07 campaign, more than 800 pledges were made to change over 1,200 incandescent light bulbs to ENERGY STAR qualified compact fluorescent light bulbs.
- Xcel Energy offers North Dakota customers a rebate on the purchase of ENERGY STAR programmable thermostats.
- The Century Center, which houses the North Dakota Department of Commerce, and the Job Service North Dakota office building have earned the ENERGY STAR for superior energy performance.

# Examples of ENERGY STAR Partners Protecting the Environment

## North Dakota Organizations Partnering with ENERGY STAR

- Building Concepts
- Cass County Electric Cooperative
- Cavalier Public Schools
- Eidsness Construction, Inc.
- Energy Management Solutions
- EnergyBlock
- Front Street Lighting
- Global Electric Motorcars, LLC
- JR Construction
- Leingang Century Siding and Window
- Maranatha Custom Homes
- Minnkota Windows
- Montana-Dakota Utilities Co.
- North Dakota Division of Community Services
- One Source Lighting
- Prairie Engineering, P.C.
- RJR Homes, Inc.
- Sunward Corporation
- Superb Homes, LLP
- Thermal Line Windows
- Walhalla Public Schools

## Key ENERGY STAR Partners Transforming the Residential Market

- 6 North Dakota companies are building ENERGY STAR qualified homes.
- The most active home builders in North Dakota are Building Concepts, Eagle Panel Systems, Inc., and Eidsness Construction, Inc.
- The most active manufactured home builder is Schult Homes.
- Energy and Environmental Ratings Alliance and Energy Management Solutions are actively promoting ENERGY STAR qualified homes.

## Fargo VA Medical Center

- Improved energy efficiency through new roof and wall insulation, high-efficiency lights and lighting control systems, and decreased window infiltration.
- Educates staff on conservation policies and encourages them to report faulty equipment.
- Uses ENERGY STAR to identify new opportunities for savings and considers lifetime benefits of facility equipment in relation to costs.

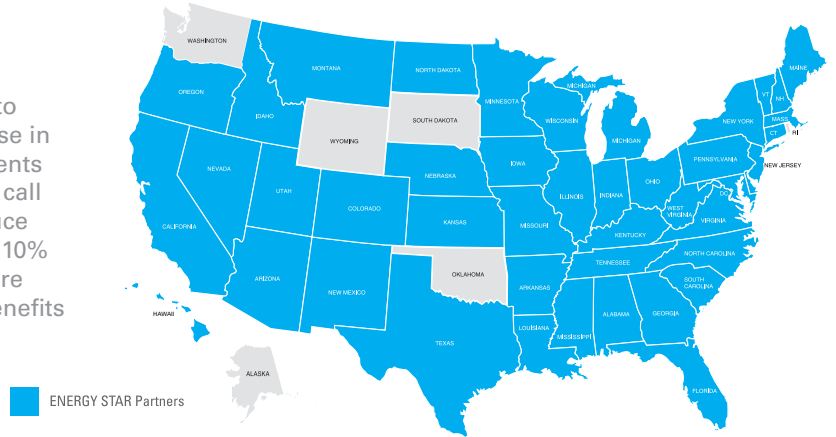

## ENERGY STAR Labeled Buildings in North Dakota

- 437 Fargo VA Medical/Regional Office Center, Fargo
- West Elementary, Grand Forks
- Winship Elementary, Grand Forks
- Job Service, Bismarck
- SUPERVALU Supermarket, Fargo
- WSI - Century Center, Bismarck

# How States are Working with ENERGY STAR

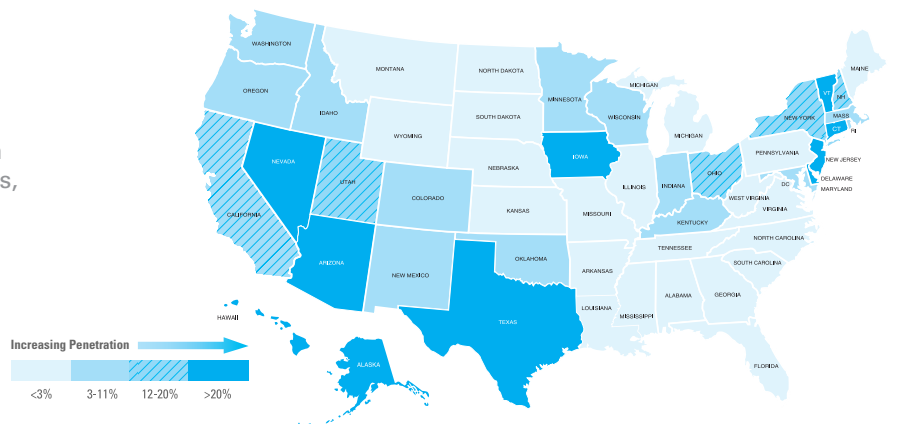

## ENERGY STAR State Partners

More than 40 states are leveraging ENERGY STAR to improve energy efficiency and reduce the energy use in their states. For example, almost 30 state governments are participating in the ENERGY STAR Challenge, a call to action for building owners and operators to reduce energy use across their entire building portfolio by 10% or more. These and other efforts by state partners are helping to bring the financial and environmental benefits of energy efficiency to their states.

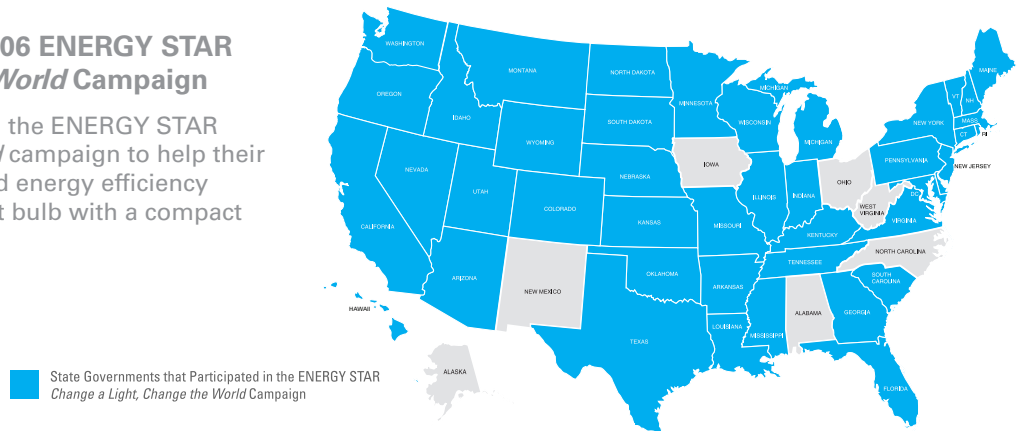

## ENERGY STAR Qualified New Homes Gaining Market Share

More than one in 10 new homes built in the United States earns the ENERGY STAR, but in 10 states and more than 20 metropolitan areas, market penetration is greater than 20%.

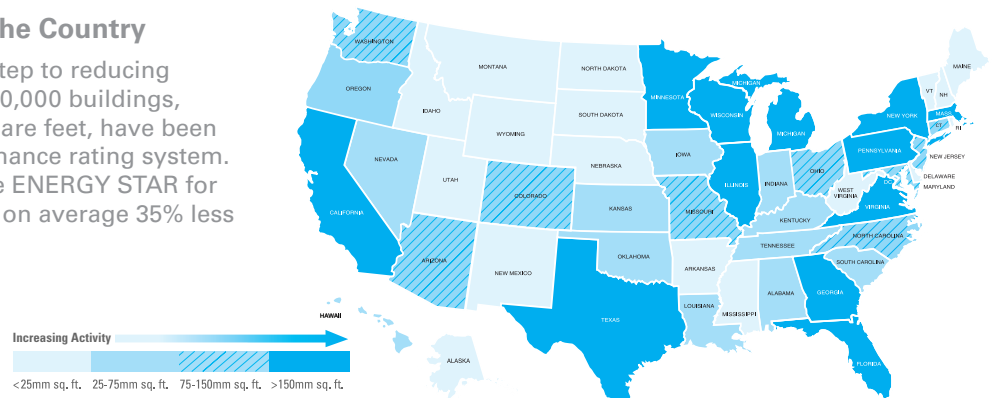

## States Participating in the 2006 ENERGY STAR Change a Light, Change the World Campaign

State governments are promoting the ENERGY STAR *Change a Light, Change the World* campaign to help their residents take the first step toward energy efficiency by replacing an incandescent light bulb with a compact fluorescent light bulb (CFL).

## Benchmarking Activity Across the Country

Benchmarking is an important first step to reducing a building's energy use. More than 30,000 buildings, representing more than 5 billion square feet, have been assessed using EPA's energy performance rating system. Of those, about 10% have earned the ENERGY STAR for superior energy performance, using on average 35% less energy relative to typical buildings.

# ENERGY STAR

Since its inception by the U.S. Environmental Protection Agency (EPA) in 1992, ENERGY STAR has helped individuals and organizations across the country adopt cost-effective, energy-efficient technologies and practices, better manage their energy costs, and help protect our environment. More than 9,000 organizations have partnered with ENERGY STAR to bring energy efficiency to their customers, the public, and themselves; and the results are adding up. Americans have purchased more than 2 billion ENERGY STAR qualified products, and thousands of companies have used EPA's guidelines to manage their energy more strategically. In 2006 alone, Americans, with the help of ENERGY STAR, prevented 37 million metric tons of greenhouse gas emissions—equivalent to eliminating the emissions from 25 million vehicles—and saved about \$14 billion on their utility bills, all while helping to grow the economy.

## ENERGY STAR for Consumers

Whether consumers are looking to replace old appliances, remodel their homes, buy a new house, or get the most from the equipment they have, ENERGY STAR can help. ENERGY STAR is the government-backed symbol for energy efficiency, providing credible and objective information on which consumers can rely to make well-informed decisions. The U.S. Department of Energy (DOE) has partnered with EPA since 1996 to bring ENERGY STAR qualified products to consumers. By choosing ENERGY STAR, consumers can save up to 30% on their energy bills—about \$600 a year—and enjoy the quality, performance, and comfort they expect.

Consumers can find the ENERGY STAR label on over 44,000 individual product models across more than 50 product categories, including appliances, home electronics, office equipment, heating and cooling equipment, lighting, and more. These products use up to 90% less energy compared to standard models. New homes can also earn the ENERGY STAR, and the Home Performance with ENERGY STAR program helps homeowners retrofit their existing homes for improved energy efficiency.

## ENERGY STAR for Businesses and Organizations

Many businesses and organizations can save up to 30% on energy bills through improved energy management practices and building upgrades. EPA offers its ENERGY STAR partners—those organizations that have committed to energy efficiency improvements—a host of tools and guidance, including proven energy management strategies and standardized management tools to help them achieve their goals.

EPA encourages all organizations to assess the energy performance of their buildings, set goals for improvement, and track their progress through its ENERGY STAR Challenge. And EPA offers a national energy performance rating system for buildings (providing building-level energy efficiency scores on a scale from 1 to 100) to help them do this. More than 30,000 buildings have been assessed, thousands of buildings have been improved, and more than 3,200 buildings (and 20 industrial facilities) have earned the ENERGY STAR. The ENERGY STAR buildings offer excellent real-life examples for others, using 35% less energy compared to typical buildings—and about 400 of them use 50% less energy.
