

## **ALTERNATIVE FUEL VEHICLES AND EMERGENCY RESPONSE: BEST PRACTICES FROM CITIES AND STATES**

*Breakout Session at the International Association of Emergency Managers Annual Conference*

Savannah International Trade and Convention Center  
1 International Drive, Savannah, Georgia, 31402  
Wednesday, October 19, 2016  
1:45 p.m.

### **BREAKOUT SESSION SUMMARY**

When petroleum is in short supply, alternative fuel vehicles can provide needed transportation services and help communities prepare for and recover from disaster. The Initiative for Resiliency in Energy through Vehicles (iREV) is a nation-wide project that has developed resources that emergency planners can use to integrate alternative fuel vehicles into emergency planning and response activities. During this breakout session, participants will learn about resources developed under iREV, and will hear from cities and states that have successfully used biodiesel, electric, natural gas, and propane vehicles during emergencies.

#### **Moderator**
