

Willdan is a national leader in energy, engineering, and software consulting. Since 1964, we have helped clients across all markets achieve their long-term performance and efficiency goals. We work closely with utilities, engineers, architects, facility owners, and municipalities to improve new construction, existing buildings, infrastructure, and electric grids. NEO®, our Energy Design Assistance software, is used on approximately 800 projects each year and streamlines new construction design and existing building retrofits through comparative analysis rooted in industry-standard and DOE-supported simulation tools.
